

Revisions to comments on layouts – 1/26/25

1. Accepted, the water bodies were changed from 'Water Intermittent' to Solid (201R, 201G, 201B, 100a). Outline added with color (178R, 178G, 178B, 100a) and width 1.
2. We can discuss different symbology for the fields. Fields are currently a vectorized layer from the NLCD raster layer of 30m tiles. Fields appear as sampled rectangles.
3. Still working on adding hillshade as a raster layer instead of PNG. Plan to increase transparency and filtering spectral band.
4. Accepted, see the style guide for label shields.
 - a. If we want the County Routes (pentagon) symbol, I can add that svg file.
5. Yes, the road layer has a Label Class that can be configured and toggled. Will require a lot of brute force in the code but it is possible.
6. Accepted, railroad added with 'Railroad' symbology.
7. Accepted, streams layer added from NYS Hydrology ArcGIS Server. Can toggle the name.
8. Accepted, FLLT boundary added as Polygon with transparent fill and dashed outline. FLLT trail added as Polyline with 'Dashed 2:2' symbology. The hike does not match the trail exactly but can be altered to match and with layered symbology.
9. Will georeference the lake. Need a reference.
10. Accepted, see the style guide for updated symbols.
11. Can append label names to Hydro layer or save as a new point layer.
